Summary

Software Engineer with 3+ years of experience building full-stack systems with Java (Spring Boot), React, TypeScript, and C#/.NET. Owns features from technical design to release, reviews code, and mentors new team members. Built the CVE triage process behind security audits and improves AI-assisted development with Claude Code skills.

Experience

Software Engineer Dec 2023 – Present
znt-Richter – On-premise manufacturing software (MES) for semiconductor and electronics industries *Germany*

- Own features end to end with **Java (Spring Boot), React, and TypeScript** in a microservices architecture, from technical design and architecture decisions to release.
- Design and maintain **RESTful APIs** with OpenAPI (Swagger) contracts, consumed by the React frontend and by other teams' services.
- Built and run the **CVE triage process** for our product: assess dependency vulnerabilities and manage justified suppressions to pass security audits and release gates.
- Proactively improved how we use **Claude Code**: researched workflows, built reusable skills, and documented and shared best practices, now used by 30+ engineers and saving several hours per week each.
- Review teammates' code and mentor and onboard new team members.
- Migrated the frontend build from Webpack to Vite and delivered major framework and library upgrades, speeding up CI builds, page loads, and UI responsiveness.
- Introduced integration tests, frontend tests, and new CI pipeline stages (Bitbucket, Bamboo) for previously untested areas; write and maintain Dockerfiles for local development and CI.

Software Engineer Intern Sep 2021 – Aug 2022
Geotab – Connected-vehicle and fleet telematics (IoT) platform *Canada*

- Built full-stack features and RESTful APIs with **.NET Core (C#)**, PostgreSQL, and Angular for high-volume data processing and integration between services.
- Developed modular Angular components and data visualizations that improved usability and user workflows.
- Added automated tests with NUnit and Cypress to reduce regressions, and integrated services with Google Cloud Platform (GCP) in CI/CD workflows.

Web Developer Intern Jan 2021 – Apr 2021
University of Windsor – IT Services *Canada*

- Built custom Drupal modules and responsive, cross-browser interfaces with JavaScript, HTML5, and CSS3.
- Wrote Python automation scripts for testing and validation, reducing manual QA effort, and ran performance, SEO, and security audits.

Teaching Assistant (Part-time) Sep 2019 – Apr 2023
University of Windsor *Canada*

- Mentored students in Java, Object-Oriented Programming, Web Development, and Algorithms; guided debugging, algorithm design, and code quality, and graded assignments.

Technical Skills

Programming Languages: Java, TypeScript, JavaScript, C#, Python, SQL, HTML5, CSS3
Frameworks & Data: Spring Boot, React, Angular, .NET Core, Node.js, Vite, Webpack, PostgreSQL
APIs & Architecture: REST API Design, OpenAPI (Swagger), Microservices, Software Architecture
Cloud & DevOps: Google Cloud Platform (GCP), Docker, CI/CD, Bamboo, Bitbucket, Git
Testing & Security: Unit/Integration Testing, TDD, NUnit, Cypress, CVE Analysis, Vulnerability Management
AI-Assisted Development: Claude Code, Agent Skills, AI-Assisted Engineering Workflows
Practices: Agile (Scrum, Kanban), Code Reviews, Clean Code

Education

University of Windsor 2023
Bachelor of Computer Science – Software Engineering, Honours *Canada*

- Graduated with Distinction; LEAD Gold Medallion Scholar.
